

## **Minutes Of Meeting**

**Date : 05-02-2024**

**4:30 pm – 5:30 pm**

- Research the best architecture to host the app, and give reason to do that
- Make sure all the other team members have run the app on their local machines
- Start with the basics, data engineering architecture definition, components of architecture of an app, things to consider while building the architecture (eg concurrency, support new functionality, efficiency) etc. start immediately researching on it
- Plan to finalise the architecture in the next 2-3 meets, should not be miscalculated at all
- Need to understand the tradeoff with flash and django, and understand how it'll affect the architecture in future
- Next meet: discussing about app architecture
- Once ui's are decided, they will have to be approved by ceo itself after incorporating comments of both of the mentors, there will be a need of multiple iterations
- For UI development, make sure that the colour palette is also well thought upon
- How the support image is currently being fed
- Get a rough draft ready by Wednesday
