Minutes of Meet (14 Feb)

Time: 5:30 to 6:15 pm

Firstly, Clients reviewed all the UI pages which were improved by us. We showed them and also asked some suggestions.

Some changes were suggested like-
- On homepage 4 cards are better than compared to 10 cards which will look better
- Adding options for incrementing and decrementing if there are any discrepancies in the number of items we got in items page.
- Adding scroll bar instead of next block buttons in items page
- And some more if we can

And also we have to make a ppt for the all pages so that it can be presented to main client, and also try to add functionalities to the figma page so that it will be easy to control

And for backend peeps , try to find alternatives of AWS
